INTRODUCTION

This report presents the major findings of the graduate employment survey conducted by the Career Center on the employment conditions of the bachelor's degree graduates of 2023.

The survey covers a total of 2,432 full-time bachelor's degree graduates from the five Schools/Office. It was conducted from September to December 2023. Graduates were invited to complete and submit the questionnaire online. Extensive telephone interviews to graduates were carried out subsequently to collect and verify data. The response rate was 90.7%, with 2,205 valid returns at the close of the survey on 31 December 2023. The collected information represented the employment situation of graduates at the point in time when they responded to the survey. It did not trace job changes of graduates.

In this report, wherever appropriate, comparisons were made with employment conditions of the batch of graduates in the past year(s).
